

Front End

View Layer

What the user  
actually  
interacts with

Where most  
HTTP requests  
are initiated

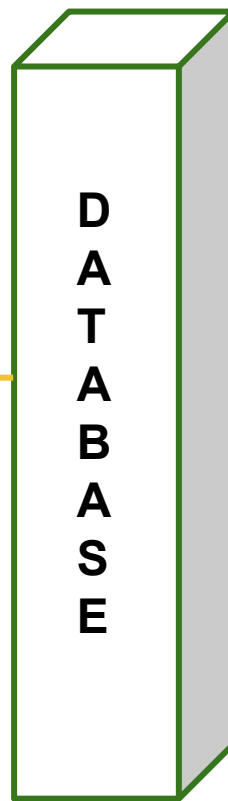

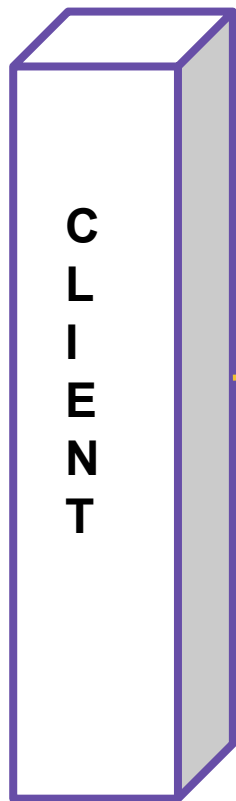

Back End

The “Motor”

Waits for  
requests, then  
serves  
responses

Where the  
logic lies for  
routing HTTP,  
Database, and  
API requests

API requests

Storage bucket

Place to store  
data even after  
the app closes

Used for things  
like user  
authentication,  
saving progress,  
etc.
